OWN MODELED OUTBOARD

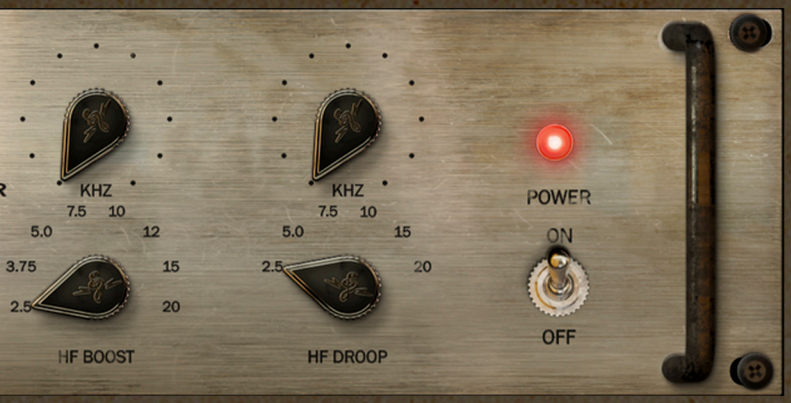

PEQ-2
PROGRAM EQUALIZER

i73 PRO DSP / NATIVE

A POWERFUL SECRET WEAPON FOR MANY DURING THE LAST 60 YEARS

The Lang PEQ-2 Program Equalizer was almost lost in time before Heritage Audio bought and relaunched the brand in 2022. Not very many units were made and those that have survived until today are carefully guarded by their lucky owners.
Also known as the "Transistors Pultec" as both units are based on the same patented Western Electric design, those that are lucky enough to still have them have stated that they have become their "secret weapon".

FINALLY AVAILABLE TO EVERYONE IN PLUGIN FORM

So, once again, Heritage Audio is on the scene to make this nearly lost treasure available to any and all. After successfully recreating the legendary outboard unit back in 2022, we believe we are the only ones entitled to take the next step and faithfully represent the unit's uniqueness into a plugin that really does justice to the original...something that hasnt being the case up until today.
So, after months of careful modelling, the LANG PEQ-2 is now available for purchase in native form so grab one while you can...you will not regret it.

AT LAST, A LANG PEQ-2 PLUGIN THAT DOES JUSTICE TO THE HARDWARE

While having a very simple and easy layout, the PEQ-2 can be deceiving as it is actually capable of some very extreme processing all while maintaining the musicality of your signal. With independent controls for Boost and Droop (Cut) for both the High and Low bands you can quickly transform your material in interesting, creative ways that you have almost certainly never considered before.

The ability to boost and cut at the same or similar frequencies produces exciting new equalized response curves. Experimentation is key, but you will quickly realize just how powerful this feature can be.

Not only does the PEQ-2 offer Low Shelf boost and cut control and High Shelf cut, but it also has a High Peak Boost with a completely variable Q (Bandwidth) setting that spans from Sharp to Broad to cover any needs. What's more, the range of Boost actually varies depending on what your selected Bandwidth setting is to offer a very smooth and natural response at all times... Very clever indeed.

THE HERITAGE AUDIO WAY

Our goal is to create helpful tools to channel creativity and put the focus back on music production. That is why we want to reach as many users as possible with a comprehensive and fair pricing scheme:

Therefore, all LANG PEQ-2 hardware owners will get the LANG PEQ-2 native plugin for free and all i73® PRO owners will get both LANG PEQ-2 native and the DSP plugin for free.
As for the rest, a guaranteed no BS price of $99 / 99€ and a 14-Day demo trial.

No BS price: $99 / 99€

Available for Mac and Windows in AAX, AU and VST3

FULL ANALOG EXPERIENCE
