Introducing new Black Lion Audio PBR LIT Patchbays.

Eliminate confusion when routing your racks of precious gear with the PBR-LIT patchbays from Black Lion Audio. Built to proven Black Lion standards of build quality and signal conductivity, the PBR LIT patchbays — available in TRS and TT/DB25 configurations — feature customizable, brightly-lit LED displays for every input and output. Simply connect a USB keyboard directly to your LIT to customize the display, or use the included PatchCAD LIT software to create custom text to export directly to your patchbay using the same port.

With PBR LIT patchbays, you'll have an easier time routing your signals while adding instant vibe to your studio. Save the labels and markers for your next yard sale.

Visit **www.blacklionaudio.com** to get your rack LIT.

PBR TT LIT: 96-point TT/dB25 patchbay with LED display system, audiophile-grade jacks, and 3 normalization modes.

PBR TRS3 LIT: 48-point TRS patchbay with LED display system, audiophile-grade jacks, and 3 normalization modes.

Functional, customizable, *and* good-lookin'.

LIT's LED displays support up to 12 characters to describe your connections on the PBR TRS³ LIT; six on the PBR TT LIT. The brightness of the screens is user-adjustable to suit your viewing angle, eyesight, and studio vibe.

To customize the display, you have two options: simply connect a USB keyboard to the front of the unit and start typing... or you can use the included PatchCAD LIT software to create your custom digital display on your computer, and export them to a USB drive to load directly into the unit.

PatchCAD LIT (Mac/Win) lets you customize your digital display using a quick, familiar spreadsheet-like interface. Simply type out how you want your display to appear, export the file to a USB drive, and connect the USB drive to your LIT patchbay and press the Update button.

Done.

Boutique build and signal quality

Your studio needs more than accessible patching — audio quality throughout the entire signal chain is essential. Black Lion Audio has been trusted for years to modify the best gear to perform beyond its original spec, and we leveraged every bit of that know-how when designing our patchbays.

Every PBR product uses audiophile-grade connectors. Every contact point is gold-plated; a major factor that's missing from most patchbays that you might have encountered. Black Lion's team of engineers have worked tirelessly to ensure that the PBR series delivers proper quality through-and-through.

The PBR patchbay series is built Black Lion-tough, with black-anodized aluminum faceplates that make for a matched and sophisticated look.
